Title: The Miser's Deathbed
Collection: Motorized Automata w/case

MAM inventory No. 1-1

The automata of this collection are exhibited in a stable manner in the Museum. They are made of cardboard, wood or metal, and have been designed by various artists. They are partly unique pieces and partly series pieces assembled and painted by our Museum.
The automata are motorized, and are set in motion through an infrared sensor, which is activated by visitors. An adjustable timer switch off the mechanism after a few seconds to a few minutes. The power supply is electric, 220 volts.
This collection also includes a series of cardboard automata, which have been reinforced with a thin and invisible layer of plywood, to withstand the wear and tear of time and movement.
